THE NEW CANAAN RUN

货运航线

TG太空 FREIGHT

This atlas covers the New Canaan Run, a Trader's Guild-vetted Class-1 trade route including worlds in each of the five clusters. Updates to this information are obtainable via secure Cortex node, and current hard copies are available to members in good standing at all Guild halls.

Starting at Londinium, the route makes its way through the White Sun, Kalidasa and Red Sun systems before reaching an apex at the Blue Sun system, New Canaan. From there, the route travels back to the core via the George and White Sun systems. A complete circuit takes 57 weeks, [illegible] capacity of a Leviathan-class cargo hauler.

Each entry includes two sections: a page dedicated to planetary information vital to traders and a page highlighting local particulars. While some of these secondary entries include additional trade data, many are presented simply to deliver a better feel for the world.

A word of caution to all members of the Guild: risks have increased as small- and mid-bulk freighters have taken on more of the Guild's drayage, [illegible] rise dramatically in trade runs outside of the core. Be [illegible] Guild emergency code. We're here to help.
